

To successfully launch the Chainmail Customer App on the iOS App Store and Google Play Store without delays, we must adhere to strict platform guidelines, particularly regarding financial services, Secure Distributed integration (Secure L2 Ledger L3, USD-denominated digital settlement assets), and user data privacy.

1. Timeline & Milestone Mapping

To avoid being blindsided, the app store submission process must begin **at least 6-8 weeks** prior to the target public launch date listed in the Whitepaper.

Milestone	Timeframe	Objective
Alpha Optimization	T-8 Weeks	Finalize mobile responsive CSS and cross-platform framework wrapper (e.g., React Native / Flutter / PWA to Native).
Compliance Audit	T-6 Weeks	Implement data deletion protocols, privacy policy, and EULA.
Developer Accounts	T-5 Weeks	Register Apple Developer Program (\$99/yr) and Google Play Console (\$25). Require D-U-N-S number for corporate verification.
TestFlight / Internal Testing	T-4 Weeks	Release to internal stakeholders via Apple TestFlight and Google Play Internal Testing.
Store Submission	T-2 Weeks	Submit to Apple App Review and Google Play App Review. (Buffer time for initial rejection and resubmission).
Public Launch	T-0	App is live, indexed, and available for download.

2. Critical Apple App Store Requirements (iOS)

Apple is notoriously strict regarding financial and insurance applications. To pass the App Review Board, we must guarantee the following:

DIGITAL SETTLEMENT & FINANCIAL REGULATIONS (GUIDELINE 3.1.5)
--

Because Chainmail utilizes automated execution rules on Secure L2 Ledger L3 for payouts using \$USD-denominated digital settlement assets, the app *must* be submitted by a legal entity (not an individual developer) that is registered as a financial institution or has the appropriate licenses in the regions it operates.

Action Item: Ensure our corporate D-U-N-S number is used for the Apple Developer Account, and our legal entity name exactly matches the app publisher name.

DATA PRIVACY & ACCOUNT DELETION (GUIDELINE 5.1.1)

Apple absolutely mandates that any app allowing account creation *must* also provide an in-app option to completely delete the account and all associated data.

Action Item: Build an automated "Delete Account" API route in the Vercel backend.

- **App Tracking Transparency (ATT):** If we use analytics that track across third-party apps, we must implement the ATT prompt.
- **Minimum Functionality:** The app cannot just be a "wrapped website" (Guideline 4.2). It must utilize native iOS features (e.g., Push Notifications, FaceID/TouchID for secure login, local caching).

3. Critical Google Play Requirements (Android)

Google Play has recently tightened restrictions on testing and financial apps.

20-TESTER RULE

New Google Play developer accounts must run a closed test with a minimum of 20 opted-in testers for at least 14 continuous days before you can apply for production access.

Action Item: We must recruit 20 beta testers internally or via the Vigilance Grid network well before launch.

FINANCIAL FEATURES POLICY

Google requires a prominent "Financial Features Declaration" during submission. If the app facilitates insurance or digital settlement payouts, we must provide links to our regulatory compliance documentation and operating licenses in our Google Play Console declaration.

- **Data Safety Section:** We must accurately declare exactly what data is collected (e.g., location data from Vigilance Grid IoT integration, financial info) and whether it is encrypted in transit.

4. Next Steps for the Development Team

1. **Architecture:** We must decide whether to wrap the Vercel app using a framework like Capacitor/Ionic, or rebuild the frontend natively using React Native.
2. **Privacy Policy URL:** A live, hosted Privacy Policy must be created on the public-facing website.
3. **Support URL:** A dedicated support and contact page must be established for user inquiries.
