

4.00 USD

1. Sentinel Smart Valve Actuator (Model S-WFC01)

- *Based on Ecowitt WFC01*
- Smart water timer valve designed to mitigate localized wildfire threat by auto-wetting property grounds when dry soil moisture thresholds trigger parametric alarm states.
- **Price:** \$79.00 USD

2. Automated Network Onboarding Workflow

The Shopify purchase acts as the initial transaction in the node onboarding lifecycle.

```
``mermaid
sequenceDiagram
    autonumber
    actor User as Policyholder / Buyer
    participant Shop as Shopify Storefront
    participant Webhook as Shopify Webhook Worker
    participant API as Chainmail API Server
    participant DB as Firestore Database
    participant Device as IoT Sentinel Device

    User->>Shop: Purchase Sentinel Kit (S-100 + S-700)
    Shop-->>User: Order Confirmation & Shipping Label Generated
    Shop->>Webhook: Event: order/paid (Payload contains email, address)
    Webhook->>API: POST /api/onboarding/provision
    activate API
```

```
API→API: Generate secure device key & pre-provision propertyId

API→DB: Write property & pre-provisioned sensors as PENDING_ACTIVATION

API-->>Webhook: Provisioning Success

deactivate API

Webhook-->>User: Onboarding Email with Device Credentials & Claim QR Code

User→Device: Mount hardware & connect to home Wi-Fi

Device→API: POST /api/ingest/ecowitt (First Telemetry Ping)

activate API

API→API: Authenticate device with secure pre-provisioned key

API→DB: Update status to VERIFIED_NODE & Activate Parametric Coverage

API-->>Device: Acknowledge (HTTP 200)

deactivate API

API→User: App Push Notification: "Node Active. Coverage Live!"

、

---
```

3. API Provisioning Endpoint Specifications

When a checkout completes, Shopify sends an order/paid webhook to our backend API server:

Endpoint: **POST /api/onboarding/provision**

Access Control: HMAC Signature verified using Shopify API Webhook Shared Secret.

Request Payload (from Shopify):

```
`json
```

```
{
```

```
"order_id": 987654321,
```

```
"email": "customer@example.com",

"shipping_address": {

  "address1": "12665 Julington Oaks Dr",

  "city": "Jacksonville",

  "province": "FL",

  "zip": "32223",

  "country": "US"

},

"line_items": [

{

  "sku": "SENTINEL-KIT-A",

  "quantity": 1,

  "name": "Sentinel Gateway & Wittboy Array"

}

]

}
```

Provisioning Logic:

1. **Address Validation:** Call Google Address Validation API to verify CASS status and retrieve exact rooftop coordinates (lat / lng).
2. **Database Record Creation:**
 - Create a new document in /properties:

```
`typescript
```

```
{
```

```
ownerEmail: "customer@example.com",

address: "12665 Julington Oaks Dr, Jacksonville, FL 32223",

lat: 30.1421936,

lng: -81.6157784,

riskScore: 72.4, // Calculated by Underwriting Agent based on coordinates

status: "PENDING_ACTIVATION",

createdAt: serverTimestamp()

}
```

,

- Create a document in `/properties/{propertyId}/sensors/Anemometry`:

```
`typescript
```

```
{

  type: "Anemometry",

  verificationStatus: "UNVERIFIED",

  hardwareType: "Ecowitt",

  value: 0

}
```

,

1. **Secret Generation:** Generate a unique password/secret token for the gateway and email it as a QR code to the user.

4. UI/UX Storefront Integration

The Shopify storefront theme will match Chainmail's core brand design system: **Cobalt & Gold / Slate & Gold**.

Theme Design System

- **Primary Background:** #030712 (Slate Black)
- **Secondary Cards:** rgba(17, 24, 39, 0.7) (Translucent Dark Blue)
- **Accents:** #D4AF37 (Metallic Gold)
- **Fonts:** Outfit (Headings) and Inter (Body)

Custom Liquid Elements

- **Network Node Counter:** A live ticker in the header showing: ACTIVE_NODES: 1,482 | TOTAL_COVERAGE_LOCKED: \$34,891,000`.
- **Map Twin Preview:** An interactive WebGL globe on the landing page showing glowing gold dots representing active coverage sensors in real time.
- **onboarding-tab widget:** Built-in section on the product page showing the simple "Plug, Scan, Insure" 3-step setup guide.

,500 payout cap) just so we can get their sensor data and help protect the community.

The Claims Adjuster Agent: When a disaster hits, this AI looks at satellite photos to verify the damage. If it's confident, it pays the customer instantly. If it isn't sure, it sends the claim to a human to review—it is strictly programmed **never** to automatically deny a claim.

The Vigilance Oracle Agent: This AI constantly watches the weather channel. If it sees a Category 5 hurricane coming, it flags the map and readies our bank accounts to pay people before they even ask.

The Quant Brain Actuary Agent: This AI watches our bank account. If we take on too much risk in one state, it automatically buys "reinsurance" (backup insurance for us) to keep the company financially safe.

Your Day-to-Day Responsibilities

As a Product Owner, you will:

- **Monitor the Vision:** Look at the Enterprise Dashboard. Are the AI agents making decisions that align with the BallPark Initiative?
- **Prioritize the Backlog:** Work with the Product Manager to decide which neighborhood of our "city" needs improvement next.
- **Understand the Costs:** The Enterprise dashboard shows you exactly how many fractions of a cent the AI is spending to make decisions. You balance the cost of the AI against the value it provides.

You don't need to know how to code the AI. You just need to know what the AI **should** be doing to help our customers. Welcome to the team!

A Learning & Development (L&D) Operations Manual

Welcome to the Engine Room!

Welcome! If you are stepping into the **Product Manager** role, you are the bridge between the visionary Product Owner and the engineering teams (and AI agents!) that actually build the system.

If the Product Owner decides **where** the ship is going, you are the captain deciding **how** we get there safely and efficiently.

Understanding the Machine

You don't need to write code, but you do need to understand how our five core components fit together:

1. **Customer App:** The front door. It must look premium (we use a Dark Mode & Gold aesthetic) so customers trust us.
2. **Enterprise Dashboard:** Your primary tool. This is where you monitor the health of the system.
3. **Nexus Core:** This handles incoming customers. It contains our Underwriting AI.
4. **Quant Brain:** This handles our money. It contains our Actuary AI.
5. **Vigilance Grid:** This handles the weather data. It contains our Oracle AI.

Managing the AI Workforce

Unlike a traditional software company where you only manage human developers, at Chainmail, you manage a team of four autonomous AI Agents. You need to know their "job descriptions":

- **The Underwriting Agent:** Evaluates new properties. **Your role:** You can inject "Carrier Rulesets" through the Enterprise dashboard to tell this AI how to behave (e.g., "Stop taking policies in Florida this week").
- **The Claims Verification Agent:** Reviews disaster photos and approves payouts. **Your role:** Monitor its confidence scores. If it sends too many claims to human review, you need to ask the engineers to tune its prompt.
- **The Vigilance Oracle Agent:** Watches global weather to pre-authorize claims. **Your role:** Ensure the telemetry feeds (like NOAA) are online so this AI isn't flying blind.
- **The Quant Brain Actuary Agent:** Buys reinsurance to protect our cash. **Your role:** Keep an eye on its spending limits.

Your Day-to-Day Execution

- **Jira Tracking:** You will live in Jira. We organize our work into Epics (e.g., "automated execution rules", "State Compliance"). You break the Product Owner's big ideas down into small tickets for the engineers.

- **Monitor the Audit Logs:** The AI agents log every single decision they make, along with how much money that decision cost in API fees. You will use the Enterprise Dashboard's "Audit Analysis" tab to ensure the AI isn't going rogue or burning too much cash.
- **Protect the Philosophy:** Chainmail is built to *embrace risk* and support the community (the BallPark Initiative). When you write requirements for the engineers, make sure the system defaults to helping the customer, not blocking them.

You are the operational glue that holds Chainmail together. Let's get to work!

,500."*

Here is how you handle it:

- Explain that because their house is in an **Extreme Risk Zone** (like right on the beach), our Underwriting AI cannot offer them half a million dollars right now.
- However, explain that we *did not reject them*. We offered them the **IoT Baseline Policy**. This gives them ,500 of emergency cash, and in return, they install a weather sensor on their house. This helps us gather data to protect the rest of their neighborhood!

Need Help?

If the screen turns white, or the map stops loading, do not panic! Just take a screenshot and send it to your Product Manager with the Jira ticket label UI-BUG.

Welcome to Chainmail! We are glad you're here.

5). Require D-U-N-S number for corporate verification. **TestFlight / Internal Testing** T-4 Weeks Release to internal stakeholders via Apple TestFlight and Google Play Internal Testing. **Store Submission** T-2 Weeks Submit to Apple App Review and Google Play App Review. (Buffer time for initial rejection and resubmission). **Public Launch** T-0 App is live, indexed, and available for download.

2. Critical Apple App Store Requirements (iOS)

Apple is notoriously strict regarding financial and insurance applications. To pass the App Review Board, we must guarantee the following:

WARNING

digital settlement & Financial Regulations (Guideline 3.1.5)

Because Chainmail utilizes automated execution rules on Secure L2 Ledger L3 for payouts using \$USD-denominated digital settlement assets, the app *must* be submitted by a legal entity (not an individual developer) that is registered as a financial institution or has the appropriate licenses in the regions it operates.

- **Action Item:** Ensure our corporate D-U-N-S number is used for the Apple Developer Account, and our legal entity name exactly matches the app publisher name.

IMPORTANT

Data Privacy & Account Deletion (Guideline 5.1.1)

Apple absolutely mandates that any app allowing account creation **must** also provide an in-app option to completely delete the account and all associated data.

- **Action Item:** Build an automated "Delete Account" API route in the Vercel backend.

- **App Tracking Transparency (ATT):** If we use analytics that track across third-party apps, we must implement the ATT prompt.
- **Minimum Functionality:** The app cannot just be a "wrapped website" (Guideline 4.2). It must utilize native iOS features (e.g., Push Notifications, FaceID/TouchID for secure login, local caching).

3. Critical Google Play Requirements (Android)

Google Play has recently tightened restrictions on testing and financial apps.

WARNING

20-Tester Rule

New Google Play developer accounts must run a closed test with a minimum of 20 opted-in testers for at least 14 continuous days before you can apply for production access.

- **Action Item:** We must recruit 20 beta testers internally or via the Vigilance Grid network well before launch.

IMPORTANT

Financial Features Policy

Google requires a prominent "Financial Features Declaration" during submission. If the app facilitates insurance or digital settlement payouts, we must provide links to our regulatory compliance documentation and operating licenses in our Google Play Console declaration.

- **Data Safety Section:** We must accurately declare exactly what data is collected (e.g., location data from Vigilance Grid IoT integration, financial info) and whether it is encrypted in transit.

4. Next Steps for the Development Team

To transition our current Vercel web app into a compliant Native App:

1. **Architecture:** We must decide whether to wrap the Vercel app using a framework like Capacitor/Ionic, or rebuild the frontend natively using React Native.
2. **Privacy Policy URL:** A live, hosted Privacy Policy must be created on the public-facing website.
3. **Support URL:** A dedicated support and contact page must be established for user inquiries.

0/mo) post-funding for team access. **Database & Scaling** GCP Firestore / Blaze Plan 00.00 Scales dynamically; covers production compute and database queries. **Object Storage (Media/PII)** Cloudflare R2 \$0.00 Selected specifically to eliminate AWS/GCP data egress fees. **Geospatial & Convective Mapping** XWeather API & Vexcel Imagery \$750.00 Commercial subscription for severe convective storm mapping and high-res post-storm imagery. **Core AI Routing & HITL Verification** Google Gemini 1.5 Flash & 3.1 Pro \$65.00 Production Gemini API tokens for IoT routing and human-in-the-loop validation. **Claims Fraud Audit** ISO Verisk ClaimSearch 50.00 Active double-claim checking API subscription. **Secure Registry & Smart Contract execution** Secure L2 Ledger Mainnet 5.00 Sponsored gas for transaction settlement. **Version Control** GitHub (Free Tier) \$0.00 Upgrade to GitHub Team (\$4/user) when engineering team expands. **Executive Compensation** COO Phase 1 (1099) \$0.00 (Equity/\$RMOR only) Transition to Full-Time Phase 1 (Salary + 8% Match) post-funding. **Total Monthly Burn** ,090.00

Future Capital Expenditure (Post-Funding)

Once institutional seed funding is secured, the following immediate upgrades will be unlocked to mature the ecosystem:

1. **CFAN Proprietary Licensing:** We will deprecate our reliance on open-source NWS/NCEP data and execute a commercial licensing agreement with the **Climate Forecast Applications Network (CFAN)**. This will drop our 5-day track error to ~131 miles, providing institutional credibility to reinsurers. *(Estimated: Negotiated Enterprise Contract)*
2. **Amazon IP Accelerator:** We will abandon the standard USPTO pending application process and utilize Amazon's vetted legal firms to fast-track our Sentinel IoT hardware Trademark and Brand Registry. *(Estimated: ,500 - \$3,000)*
3. **DVN Node Infrastructure:** Funding the initial liquidity pools on Secure L2 Ledger to incentivize legacy Third-Party Vendors (TPVs) to transition into distributed Validator Network (DVN) node operators.
