The Path Forward

\${lines[i]}

3. Job Code Testing Targets

- **CEO:** Focuses on multi-signature sequences, treasury ledgers, and cash asset parity.
- **COO:** Evaluates checkout webhooks, hardware delivery tracking, and device MAC pairing validations.
- **CRO / Legal:** Verifies Zero-Knowledge privacy proofs and automated state reports.
- **Actuaries:** Monitors coordinate drift triggers and risk pricing correctness.

Apple absolutely mandates that any app allowing account creation *must* also provide an in-app option to completely delete the account and all associated data.

Action Item: Build an automated "Delete Account" API route in the Vercel backend.

- **App Tracking Transparency (ATT):** If we use analytics that track across third-party apps, we must implement the ATT prompt.
- **Minimum Functionality:** The app cannot just be a "wrapped website" (Guideline 4.2). It must utilize native iOS features (e.g., Push Notifications, FaceID/TouchID for secure login, local caching).

3. Critical Google Play Requirements (Android)

Google Play has recently tightened restrictions on testing and financial apps.

20-TESTER RULE

New Google Play developer accounts must run a closed test with a minimum of 20 opted-in testers for at least 14 continuous days before you can apply for production access.

Action Item: We must recruit 20 beta testers internally or via the Vigilance Grid network well before launch.

FINANCIAL FEATURES POLICY

Google requires a prominent "Financial Features Declaration" during submission. If the app facilitates insurance or digital settlement payouts, we must provide links to our regulatory compliance documentation and operating licenses in our Google Play Console declaration.

- **Data Safety Section:** We must accurately declare exactly what data is collected (e.g., location data from Vigilance Grid IoT integration, financial info) and whether it is encrypted in transit.

4. Next Steps for the Development Team

1. **Architecture:** We must decide whether to wrap the Vercel app using a framework like Capacitor/Ionic, or rebuild the frontend natively using React Native.
2. **Privacy Policy URL:** A live, hosted Privacy Policy must be created on the public-facing website.
3. **Support URL:** A dedicated support and contact page must be established for user inquiries.
