

Welcome to Chainmail!

Hello and welcome! If you're reading this, you are taking on the role of a **Product Owner** within the Chainmail Ecosystem. Don't worry if you aren't deeply technical—this guide is written specifically to help you understand the "why" and "what" of our system without getting bogged down in the code.

As a Product Owner, your job is to maximize the value of the Chainmail product. You are the visionary. You decide **what** needs to be built next to serve our mission.

Our Core Philosophy

Before we talk about software, let's talk about our heart. Traditional insurance companies often look for any excuse to deny a claim. **We do the exact opposite.**

Our philosophy is to embrace risk. We want to cover people in high-risk coastal and wildfire zones. Through our BallPark Initiative, our goal is to be a pillar of community support, ensuring that when disaster strikes, families get paid instantly. Your job is to make sure every feature we build aligns with this mission.

The Chainmail Ecosystem (The Big Picture)

Think of Chainmail not as one app, but as a small city with five distinct neighborhoods:

1. **The Customer App:** The storefront. Where users buy policies and check their status.
2. **The Enterprise Dashboard:** The command center. Where you and the administrators watch the system run.
3. **The Nexus Core (Underwriting):** The bouncer. Decides who gets a policy and for how much.
4. **The Quant Brain (Finance):** The vault manager. Makes sure we have enough money to pay claims.
5. **The Vigilance Grid (Sensors):** The weather station. Listens to IoT sensors to detect disasters.

Meet Your AI Workforce

You aren't just managing human developers; you are managing four AI Agents that run the company day and night.

1. **The Underwriting Agent:** When a customer applies, this AI checks their risk. If they live in an extreme danger zone, it doesn't reject them! Instead, it offers them an "IoT Baseline" policy (a ,500 payout cap) just so we can get their sensor data and help protect the community.
2. **The Claims Adjuster Agent:** When a disaster hits, this AI looks at satellite photos to verify the damage. If it's confident, it pays the customer instantly. If it isn't sure, it sends the claim to a human to review—it is strictly programmed **never** to automatically deny a claim.
3. **The Vigilance Oracle Agent:** This AI constantly watches the weather channel. If it sees a Category 5 hurricane coming, it flags the map and readies our bank accounts to pay people before they even ask.
4. **The Quant Brain Actuary Agent:** This AI watches our bank account. If we take on too much risk in one state, it automatically buys "reinsurance" (backup insurance for us) to keep the company financially safe.

Your Day-to-Day Responsibilities

As a Product Owner, you will:

- **Monitor the Vision:** Look at the Enterprise Dashboard. Are the AI agents making decisions that align with the BallPark Initiative?
- **Prioritize the Backlog:** Work with the Product Manager to decide which neighborhood of our "city" needs improvement next.
- **Understand the Costs:** The Enterprise dashboard shows you exactly how many fractions of a cent the AI is spending to make decisions. You balance the cost of the AI against the value it provides.

You don't need to know how to code the AI. You just need to know what the AI **should** be doing to help our customers. Welcome to the team!
