

4.00 USD

1. Sentinel Smart Valve Actuator (Model S-WFC01)

- *Based on Ecowitt WFC01*
- Smart water timer valve designed to mitigate localized wildfire threat by auto-wetting property grounds when dry soil moisture thresholds trigger parametric alarm states.
- **Price:** \$79.00 USD

2. Automated Network Onboarding Workflow

The Shopify purchase acts as the initial transaction in the node onboarding lifecycle.

3. API Provisioning Endpoint Specifications

When a checkout completes, Shopify sends an order/paid webhook to our backend API server:

Endpoint: `POST /api/onboarding/provision`

Access Control: HMAC Signature verified using Shopify API Webhook Shared Secret.

Request Payload (from Shopify):

```
`json
{
  "order_id": 987654321,
```

```
"email": "customer@example.com",

"shipping_address": {

  "address1": "12665 Julington Oaks Dr",

  "city": "Jacksonville",

  "province": "FL",

  "zip": "32223",

  "country": "US"

},

"line_items": [

{

  "sku": "SENTINEL-KIT-A",

  "quantity": 1,

  "name": "Sentinel Gateway & Wittboy Array"

}

]

}
```

Provisioning Logic:

1. **Address Validation:** Call Google Address Validation API to verify CASS status and retrieve exact rooftop coordinates (lat / lng).
2. **Database Record Creation:**
 - Create a new document in /properties:

```
`typescript
```

```
{
```

```
ownerEmail: "customer@example.com",

address: "12665 Julington Oaks Dr, Jacksonville, FL 32223",

lat: 30.1421936,

lng: -81.6157784,

riskScore: 72.4, // Calculated by Underwriting Agent based on coordinates

status: "PENDING_ACTIVATION",

createdAt: serverTimestamp()

}
```

- Create a document in `/properties/{propertyId}/sensors/Anemometry`:

```
`typescript

{

  type: "Anemometry",

  verificationStatus: "UNVERIFIED",

  hardwareType: "Ecowitt",

  value: 0

}
```

1. **Secret Generation:** Generate a unique password/secret token for the gateway and email it as a QR code to the user.

4. UI/UX Storefront Integration

The Shopify storefront theme will match Chainmail's core brand design system: **Cobalt & Gold / Slate & Gold**.

Theme Design System

- **Primary Background:** #030712 (Slate Black)
- **Secondary Cards:** rgba(17, 24, 39, 0.7) (Translucent Dark Blue)
- **Accents:** #D4AF37 (Metallic Gold)
- **Fonts:** Outfit (Headings) and Inter (Body)

Custom Liquid Elements

- **Network Node Counter:** A live ticker in the header showing: ACTIVE_NODES: 1,482 | TOTAL_COVERAGE_LOCKED: \$34,891,000`.
- **Map Twin Preview:** An interactive WebGL globe on the landing page showing glowing gold dots representing active coverage sensors in real time.
- **onboarding-tab widget:** Built-in section on the product page showing the simple "Plug, Scan, Insure" 3-step setup guide.

,500 payout cap) just so we can get their sensor data and help protect the community.

The Claims Adjuster Agent: When a disaster hits, this AI looks at satellite photos to verify the damage. If it's confident, it pays the customer instantly. If it isn't sure, it sends the claim to a human to review—it is strictly programmed **never** to automatically deny a claim.

The Vigilance Oracle Agent: This AI constantly watches the weather channel. If it sees a Category 5 hurricane coming, it flags the map and readies our bank accounts to pay people before they even ask.

The Quant Brain Actuary Agent: This AI watches our bank account. If we take on too much risk in one state, it automatically buys "reinsurance" (backup insurance for us) to keep the company financially safe.

Your Day-to-Day Responsibilities

As a Product Owner, you will:

- **Monitor the Vision:** Look at the Enterprise Dashboard. Are the AI agents making decisions that align with the BallPark Initiative?
- **Prioritize the Backlog:** Work with the Product Manager to decide which neighborhood of our "city" needs improvement next.
- **Understand the Costs:** The Enterprise dashboard shows you exactly how many fractions of a cent the AI is spending to make decisions. You balance the cost of the AI against the value it provides.

You don't need to know how to code the AI. You just need to know what the AI **should** be doing to help our customers. Welcome to the team!

You don't need to know how to code the AI. You just need to know what the AI *should* be doing to help our customers. Welcome to the team! ,500."

Here is how you handle it:

- Explain that because their house is in an **Extreme Risk Zone** (like right on the beach), our Underwriting AI cannot offer them half a million dollars right now.
- However, explain that we *did not reject them*. We offered them the **IoT Baseline Policy**. This gives them ,500 of emergency cash, and in return, they install a weather sensor on their house. This helps us gather data to protect the rest of their neighborhood!

Need Help?

If the screen turns white, or the map stops loading, do not panic! Just take a screenshot and send it to your Product Manager with the Jira ticket label UI-BUG.

Welcome to Chainmail! We are glad you're here.

5). Require D-U-N-S number for corporate verification. **TestFlight / Internal Testing** T-4 Weeks Release to internal stakeholders via Apple TestFlight and Google Play Internal Testing. **Store Submission** T-2 Weeks Submit to Apple App Review and Google Play App Review. (Buffer time for initial rejection and resubmission). **Public Launch** T-0 App is live, indexed, and available for download.

2. Critical Apple App Store Requirements (iOS)

Apple is notoriously strict regarding financial and insurance applications. To pass the App Review Board, we must guarantee the following:

WARNING

digital settlement & Financial Regulations (Guideline 3.1.5)

Because Chainmail utilizes automated execution rules on Secure L2 Ledger L3 for payouts using \$USD-denominated digital settlement assets, the app **must** be submitted by a legal entity (not an individual developer) that is registered as a financial institution or has the appropriate licenses in the regions it operates.

- **Action Item:** Ensure our corporate D-U-N-S number is used for the Apple Developer Account, and our legal entity name exactly matches the app publisher name.

IMPORTANT

Data Privacy & Account Deletion (Guideline 5.1.1)

Apple absolutely mandates that any app allowing account creation **must** also provide an in-app option to completely delete the account and all associated data.

- **Action Item:** Build an automated "Delete Account" API route in the Vercel backend.

- **App Tracking Transparency (ATT):** If we use analytics that track across third-party apps, we must implement the ATT prompt.
- **Minimum Functionality:** The app cannot just be a "wrapped website" (Guideline 4.2). It must utilize native iOS features (e.g., Push Notifications, FaceID/TouchID for secure login, local caching).

3. Critical Google Play Requirements (Android)

Google Play has recently tightened restrictions on testing and financial apps.

WARNING

20-Tester Rule

New Google Play developer accounts must run a closed test with a minimum of 20 opted-in testers for at least 14 continuous days before you can apply for production access.

- **Action Item:** We must recruit 20 beta testers internally or via the Vigilance Grid network well before launch.

IMPORTANT

Financial Features Policy

Google requires a prominent "Financial Features Declaration" during submission. If the app facilitates insurance or digital settlement payouts, we must provide links to our regulatory compliance documentation and operating licenses in our Google Play Console declaration.

- **Data Safety Section:** We must accurately declare exactly what data is collected (e.g., location data from Vigilance Grid IoT integration, financial info) and whether it is encrypted in transit.

4. Next Steps for the Development Team

To transition our current Vercel web app into a compliant Native App:

1. **Architecture:** We must decide whether to wrap the Vercel app using a framework like Capacitor/Ionic, or rebuild the frontend natively using React Native.
2. **Privacy Policy URL:** A live, hosted Privacy Policy must be created on the public-facing website.
3. **Support URL:** A dedicated support and contact page must be established for user inquiries.
- 5). **Require D-U-N-S number for corporate verification. TestFlight / Internal Testing T-4 Weeks**
Release to internal stakeholders via Apple TestFlight and Google Play Internal Testing. Store Submission T-2 Weeks Submit to Apple App Review and Google Play App Review. (Buffer time for

0/mo) post-funding for team access. **Database & Scaling** GCP Firestore / Blaze Plan 00.00 Scales dynamically; covers production compute and database queries. **Object Storage (Media/PII)** Cloudflare R2 \$0.00 Selected specifically to eliminate AWS/GCP data egress fees. **Geospatial & Convective Mapping** XWeather API & Vexcel Imagery \$750.00 Commercial subscription for severe convective storm mapping and high-res post-storm imagery. **Core AI Routing & HITL Verification** Google Gemini 1.5 Flash & 3.1 Pro \$65.00 Production Gemini API tokens for IoT routing and human-in-the-loop validation. **Claims Fraud Audit** ISO Verisk ClaimSearch 50.00 Active double-claim checking API subscription. **Secure Registry & Smart Contract execution** Secure L2 Ledger Mainnet 5.00 Sponsored gas for transaction settlement. **Version Control** GitHub (Free Tier) \$0.00 Upgrade to GitHub Team (\$4/user) when engineering team expands. **Executive Compensation** C00 Phase 1 (1099) \$0.00 (Equity/\$RMOR only) Transition to Full-Time Phase 1 (Salary + 8% Match) post-funding. **Total**

Monthly Burn ,090.00

Future Capital Expenditure (Post-Funding)

Once institutional seed funding is secured, the following immediate upgrades will be unlocked to mature the ecosystem:

- 1. **CFAN Proprietary Licensing:** We will deprecate our reliance on open-source NWS/NCEP data and execute a commercial licensing agreement with the **Climate Forecast Applications Network (CFAN)**. This will drop our 5-day track error to ~131 miles, providing institutional credibility to reinsurers. *(Estimated: Negotiated Enterprise Contract)*
- 2. **Amazon IP Accelerator:** We will abandon the standard USPTO pending application process and utilize Amazon's vetted legal firms to fast-track our Sentinel IoT hardware Trademark and Brand Registry. *(Estimated: ,500 - \$3,000)*
- 3. **DVN Node Infrastructure:** Funding the initial liquidity pools on Secure L2 Ledger to incentivize legacy Third-Party Vendors (TPVs) to transition into distributed Validator Network (DVN) node operators.

This organizational chart documents the real personnel roster of the **Chainmail Solutions** team, aligned to their designated job functions, contact information, background rationales, and their custom-tailored **AI Agent Co-Pilots**.

1. EXECUTIVE LEADERSHIP TEAM

Jesse Benedick

Chief Executive Officer (CEO)

OPERATIONS

Email: jesse.benedick@chainmailsolutions.ai
Phone: (941) 504-6154

Rationale: Direct leadership, insurance sector expertise, and blockchain framework alignment.

🛡️ CO-PILOT AGENT

Treasury Ledger Agent

Manages multi-signature payouts, capital reserves, and monitors corporate solvency metrics.

Output: Payout Authorization / Ledger Logs

Greg Narcisi

Chief Operating Officer (COO)

OPERATIONS

Email: greg.narcisi@chainmailsolutions.ai
Phone: (843) 254-1131

Rationale: Operations lead overseeing cross-platform code implementation and day-to-day scaling.

🛡️ CO-PILOT AGENT

Intranet Manager Agent

Automates daily corporate briefings, synchronizes developer backlogs, and pushes logs to Google Drive.

Output: Daily 3AM Brief / Jira Synced Board

Samantha McKinney

Chief Financial Officer (CFO)

FINANCE

Email: samantha.mckinney@chainmailsolutions.ai
Phone: (904) 378-6838

Rationale: Accounts manager with experience in structured accounts (PGA and Natural Life

ledgers).

🛡️ CO-PILOT AGENT

budget_automator

Monitors cloud hosting/API quotas vs spending limits, keeping operational burn to a minimum.

Output: Budget Alerts / Grant Util Digests

Jeremy Metts

MARKETING

Chief Marketing Officer (CMO)

Email: jeremy.metts@chainmailsolutions.ai

Phone: (904) 536-1013

Rationale: Leads strategic relationship building, agent acquisition, and sales plan development.

🛡️ CO-PILOT AGENT

loi_converter

Converts broker Letters of Intent into onboarding profiles, generating pre-filled contracts.

Output: Onboarded Broker Profiles

Michael Barnett

OPERATIONS

Chief of Insurance & Claims (COI/COO)

Email: michael.barnett@chainmailsolutions.ai

Phone: (386) 589-2393

Rationale: Hands-on insurance operations expertise, CAT adjusting, and claims validation models.

🛡️ CO-PILOT AGENT

vigilance_shield

Monitors claims for anomalies, pixel alteration, and geofencing discrepancies. Handles HITL handoffs.

Output: Fraud Flags / Claims Verification Logs

Crystal Settles

HUMAN RESOURCES

Chief Human Resources Officer (CHRO)

Email: crystal.settles@chainmailsolutions.ai
Phone: (941) 343-7910

Rationale: Handles all human resources aspects, organizational growth, and compliance guidelines.

🛡️ CO-PILOT AGENT

Identity_Access_Manager

Authorizes team keys, enforces Role-Based Access Control (RBAC), and manages credentialing.

Output: Active Permissions / Auth Logs

Elizabeth Bullard

TENTATIVE
EXPERIENCE

Chief Experience Officer (CXO)

Email: elizabeth.bullard@chainmailsolutions.ai (Tentative)
Phone: (TBD)

Rationale: Over DVN validator installations, local device installer networks, customer experience simplification, and onboarding SLAs.

🛡️ CO-PILOT AGENT

Product_Consumer_Agent

Monitors activation pipelines, tracks onboarding metrics, logs friction points, and handles consumer telemetry.

Output: Onboarding SLAs / DVN Verification Logs

Greg Narcisi

INTERIM
LEGAL

General Counsel (GC)

Email: greg.narcisi@chainmailsolutions.ai (Interim)
Phone: (843) 254-1131

Rationale: Temporary oversight of multi-state regulatory filing bundles and legal framework compliance.

🛡️ CO-PILOT AGENT

Bureaucracy_Buster

Formats data for targeted state regulatory reporting
(NY/CA/FL/TX/GA/SC/NC/AL/MS/LA/TN/KY/OH/PA/OK).

Output: Regulatory Filings / PCLR & AG53 specs

2. ENGINEERING & TECHNICAL OPERATIONS

Sailesh Parajuli

TECHNOLOGY

System Architect (CTO)

Email: sailesh.parajuli@chainmailsolutions.ai

Phone: (850) 559-6589

Rationale: System architecture experience with Citizens; Web3 node infrastructure lead.

🛡️ CO-PILOT AGENT

Hardware_Oracle_Wrangler

Validates incoming IoT station packets and manages Ambient Weather / Ecowitt API interfaces.

Output: Live Ingestion Feed Status

Jenn Soest

PIPELINE

Director of AI, Data & Automation (TBD)

Email: jenn.soest@chainmailsolutions.ai

Rationale: Guides AI agent prompts, model optimization, and data governance standards.

🛡️ ASSIGNED AGENT

executive_communications_agent

Generates summaries, translates operational alerts into board updates, and oversees communications formatting.

Output: Executive Board Reports

Ara Aguilar

PIPELINE

ClaimCenter (Guidewire) Integration (TBD)

Rationale: Technical lead for connecting legacy Guidewire claims systems with our parametric engine.

🛡️ ASSIGNED AGENT

Product_Owner_Agent

Translates integration requirements into standard Jira epics, user stories, and acceptance criteria.

Output: Jira Integration Tickets

Nicole Johnson

PIPELINE

Data Manager (TBD)

Rationale: Technical database analyst tracking schema migrations and API telemetry databases.

🛡️ ASSIGNED AGENT

adversarial_qa_engineer

Runs edge-case simulations on database triggers to ensure code limits are enforced correctly under stress.

Output: Test Coverage Reports

Nishee Johnson

PIPELINE

Tech Infrastructure Lead (TBD)

Phone: (765) 532-0986

Rationale: Specializes in bare-metal setups, hardware diagnosis, and dev environment reliability.

🛡️ ASSIGNED AGENT

browser-automation

Automates environment health checks, end-to-end user flows, and prints status reports.

Output: Status Logs

Dean Savage

PIPELINE

Equipment Logistics Lead (TBD)

Phone: (904) 537-6487

Rationale: Coordinates the physical procurement and deployment of weather station arrays.

🛡️ ASSIGNED AGENT

browser-automation

Queries hardware vendor shipments to verify delivery timelines for Sentinel boxed arrays.

Output: Delivery Status Reports

3. OPERATIONS & SUPPORT STAFF

Rose Mazard

PIPELINE

Claims & Experience Lead (TBD)

Phone: (786) 748-1652

Rationale: Claims administration, customer service triage, and adjuster dashboard reviews.

🛡️ ASSIGNED AGENT

Product_User_Agent

Simulates support desk interactions to test portal clarity and user guides.

Output: UX Optimization Tickets

Trent McKinney

PIPELINE

Head of Agency (TBD)

Phone: (850) 322-9543

Rationale: Builds agent networks, driving marketing plans and parametric endorsement integrations.

🛡️ ASSIGNED AGENT

Product_Manager_Agent

Drafts distribution guides and coordinates agent training events.

Output: Agent Training Bulletins

Beth Stake

PIPELINE

L&D Specialist (TBD)

Phone: (904) 707-8877

Rationale: Leads training curriculum design and caseworker onboarding.

🛡️ ASSIGNED AGENT

Product_User_Agent

Translates complex system specifications into readable training playbooks.

Output: Onboarding Documentation

4. ADVISORY BOARD

Product_User_Agent

Translates complex system specifications into readable training playbooks.

Output: Onboarding Documentation

4. ADVISORY BOARD

Name	Target Domain	Strategic Alignment / Background
Barry Gilway	Insurance Strategy	Former CEO of Citizens Property Insurance Corp (CPIC); industry titan advising on FL regulatory filings.
Bobby Ayers	Claims & Mediation	Appraisal, claims adjustments, and litigation resolution manager.
Heath Clark	CAT Management	Former CAT Manager, current AVP of claims operations.
Mike Guerra	Insurance Governance	Former Governance Director with 40 years of industry oversight experience.
Vivek Prasannan	Blockchain Architect	Advising on token launch models and cross-chain Mesh Security staking.
Bryan Rodvold	Community Operations	Community building, Discord moderation, and Web3 marketing.
Dale Brassfield	Business Strategy	Independent agency and firm owner advising on retail distribution.
Curtis Pilot	Business Strategy	Adjudication firm owner advising on large-scale CAT operations.
