

1. Welcome to the Future of Insurance!

Welcome to Chainmail Solutions! Whether you are a Customer Service Rep, an Enterprise Administrator, or a Claims Reviewer, this guide will show you how to use the Chainmail software. You don't need to be a programmer to use our system. The software does the heavy lifting for you!

2. What is Chainmail?

Traditional insurance is slow. At Chainmail, we use **Parametric Insurance**. This means we have sensors (like weather stations) all over the country. If the sensor says the wind blew 150 MPH, we just pay the customer instantly. No waiting, no arguments. We do this to support our community (the BallPark Initiative).

3. How to Use the System (Your Role)

If you are an Enterprise Administrator

You will spend your time in the **Enterprise Dashboard**:

- **The Map:** Live map of the US. Green dots are safe customers, red dots are customers in storm zones.
- **The AI Audit Tab:** Watch exactly what the four AI agents are doing in real-time. If you see an anomaly, report it to the Product Manager.

If you are a Claims Reviewer

Most of the time, the AI Claims Adjuster approves payouts instantly. If it is confused (blurry photos, coordinate mismatch), it routes the claim to your **Review Queue**:

1. Log in and view the Review Queue.
2. Check the AI's notes explaining the routing exception.
3. Review the evidence. If it is valid, click **Approve**. Remember: we want to find ways to cover customers, not deny them.

The "IoT Baseline" Feature (For Customer Support)

If a customer calls saying they tried to buy a \$500,000 policy but only got offered \$2,500:

- Explain that because they are in an ****Extreme Risk Zone**** (e.g. beachfront), our Underwriting AI cannot offer them the full amount immediately.
- Explain that we offered the ****IoT Baseline Policy**** instead (\$2,500 of emergency cash) to get a weather sensor installed, gathering data to protect their neighborhood and qualify them for higher limits.
